| <b>Product description</b>        | <p>The THERA-Trainer bemo is a therapeutic device for circular passive, assistive or active movement of the upper and lower extremities. The transition from motor-supported passive to active therapy is seamless. The medical device can be used in a recumbent, semi-recumbent or sitting position.</p> <p>THERA-Trainer bemo can be wheeled from bed to bed and positioned individually for each patient over the bed using the electric portal height adjustment, requiring no patient transfer. The device can be quickly adapted to the patient and thus facilitates safe, easy and efficient therapy for early mobilisation.</p> <p>THERA-Trainer bemo is a powered training device, used in rehabilitation for the relief/treatment of mild to severe impairments of the movement-related functions.</p>                                                                                                                                                                         |
| <b>General environment</b>        | Professional healthcare: Suitable for use in enclosed spaces in facilities (e.g., clinics, nursing homes, therapy practices, dialysis).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
